

Custom Software Solution

RASA facilitates in solving clients problem by designing customized software solutions in area of life science. Developing software with your own requirement may be costlier than generalized software but you can get what you need exactly. You may not find a generalized software confirming your requirement, or it end in tedious procedure to get customize the generalized software as they generally include many unwanted feature and miss some of your custom requirements. We provide services for development of such custom software after analyzing your business problem and hammered to shape it up to your exact need. We always assume end user's time as precious. So we design user friendly GUI.

Our core team has successful experience in software industry, specially catering services in international market, we have refined our approach to the complex issues of software outsourcing and custom software development in life science domain that enables us to deliver high quality and cost-effective solutions to our customers.

RASA Team Profile

- Experience and skilled programmer
- Experience Bioinformatics chemoinformatics professional
- Experience in R & D
- Time saving
- Cost effectiveness
- Scientific testing

RASA 's USP

- Strong Domain knowledge in Life Science
- RASA grantee 100% Success & assurance of quality
- Pool of highly educational, committed and honest professionals.
- Transparent business relations
- Robust, scalable, and cost-effective software solutions within your budget
- Distributed/parallel computing facility
